Subject: Website Resource Suggestion

Dear Friends at Pulp, Paper and Woodworkers of Canada,

I came across Pulp, Paper and Woodworkers of Canada today and noticed we share an interest in employee safety. My name is Ashley Robertson and as the Communications Director for Mesothelioma Symptoms, I'd like to offer our resource to inform your members of this cancer threat. Our site, <http://www.mesotheliomasymptoms.com>, provides the legislation, treatment and legal information needed if asbestos exposure occurred.

The past frequency of asbestos exposure in unionized professions highlights the need to acknowledge this threat, which can lie dormant for 20 to 50 years. Asbestos exposure leads to mesothelioma, a lethal cancer without cure. Its past popularity as an insulator means it found use in hundreds of industrial applications throughout offices and factories. Furthermore, evidence suggests many employers knew of the risks of asbestos, which has been used for thousands of years, yet chose not to warn workers or provide proper safety equipment.

I noticed your links page, http://www.ppwclocal9.com/links_page.htm, directs visitors to related sites. I would like to offer ours as another links page resource to offer worker support. Ideally, a single text link to <http://www.mesotheliomasymptoms.com> will direct visitors to this site. Please let me know if this partnership interests you.

Thanks again,
Ashley Robertson
